

For Immediate Release:

Strategic Partnership Announced for Process Management Work Instruction Software

Pomona, CA, USA - October 2009 - Everett Charles Technologies, (ECT), a Dover Company and a leader in the development of advanced technology board test products, announced that ECT has finalized a strategic partnership with ScanCAD International of Littleton, CO, USA, a global supplier of process management tools. This partnership provides for ScanCAD International to exclusively distribute and support the ProWorks process management work instruction software family of products globally within the electronics industry.

"The ProWorks Work Instruction Software (WIS) products combine a dynamic blend of process management, work instruction and Manufacturing Execution Software (MES) that allows for the dissemination and collection of Manufacturing Intelligence (MI) on the shop floor. These products fit nicely with ScanCAD's family of process management tools", stated Mark Swart, Vice President of Corporate Research & Development, ECT.

"This revolutionary technology integration will transform manufacturing everywhere. Users find it easy, cost effective, and light years ahead of their current solutions. The timing of the ECT and ScanCAD partnership is perfect for a market intercept of the emerging WIS Market. As regulatory requirements continue to increase, the Global roll-out of the ProWorks WIS products will enable more people to share more information in a controlled real-time environment, significantly increasing productivity", stated Bill Loving, President, ScanCAD International.
